

# GARAGE FLOOR COATINGS

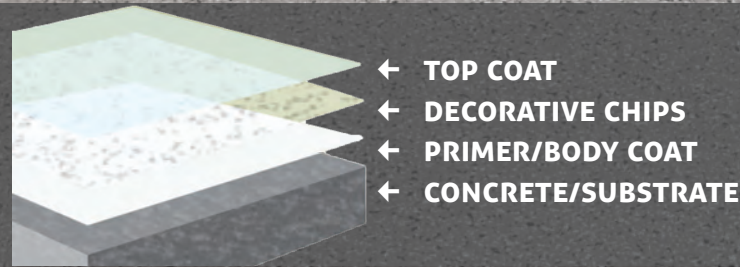

Now you can turn your ordinary garage into an extraordinary space. Carolina Custom Garages offers 100% solid epoxy and commercial-grade polyaspartic top coats. Our partnership with industry leaders in industrial-grade flooring allows us to offer a wide variety of decorative chip color-blend floor coatings and garage cabinets.

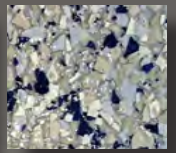

The floor coating process begins with superior concrete preparation, repairing cracks and holes. We diamond-grind to remove surface residue, open up pores and create a profile on the concrete for a superior bond that allows the base coat to adhere. Our state-of-the-art vacuum systems help minimize airborne dust during preparation.

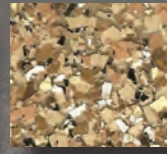

Our coating system can be applied in two days. Its rapid cure ability means that you can get back on your floor 24 hours after completion. Our full-chip floors will not peel up under hot tires and salt will not damage the coating.
